Dear Justin White,
It was with great pleasure that I attended your lecture at the National Museum about the ancient ①remains that you discovered during your trip to Southeast Asia. I am currently teaching World History at Dreamers Academy and feel that my class would greatly appreciate a visit from someone like you who has had the experience of visiting such historical sites. It is my hope that you would be ②willing to give a special lecture to my class and share stories about your travels. I have ③included my class schedule and would be able to make ④agreements for you at any time that you would be available. You can give me a call at 714-456-7932 to let me know if your schedule ⑤permits. Thank you very much.
Sincerely,
Caroline Duncan

On his march through Asia Minor, Alexander the Great fell dangerously ill. His physicians were afraid to treat him because if they didn't succeed, the army would blame them.

(A) Horrified, Philip threw himself down at the king's bedside, but Alexander assured him that he had complete confidence in his honor. After three days, the king was well enough to appear again before his army.

(B) Only one, Philip, was willing to take the risk, as he had confidence in the king's friendship and his own drugs. While the medicine was being prepared, Alexander received a letter accusing the physician of having been bribed to poison his master.

(C) Alexander read the letter without showing it to anyone. When Philip entered the tent with the medicine, Alexander took the cup from him, handing Philip the letter. While the physician was reading it, Alexander calmly drank the contents of the cup.

 The sun caught the ends of the hairs along the bear's back. (1) Shining black and silky, ①it stood on its hind legs, half up, and studied Brian, just studied him. (2) Then ②it lowered itself and moved slowly to the left, eating berries as it rolled along, delicately using ③its mouth to lift each berry from the stem. In seconds ④it was gone. Gone, and Brian still had not moved. (3) His tongue was stuck to the top of his mouth, the tip half out, and his eyes were wide. (4) ⑤It was just a sound of fear, of his disbelief that something that large could have come so close to him without his knowing. (5) Brian couldn't stop shivering, thinking that the bear could return and attack him anytime.

 The effects of climate change will not be equally distributed across the globe, and there are likely to be winners and losers as the planet warms.

① Thus, this effect will be made worse for these regions if developed countries are able to make up for the fall in agricultural output with new sources, potentially from their own domestic economies as their land becomes more suitable for growing crops.

② Not only do many developing countries have naturally warmer climates than those in the developed world, they also rely more heavily on climate sensitive sectors such as agriculture, forestry, and tourism.

③ For example, regarding climate effects in general, developing countries are likely to experience more negative effects of global warming.

④ However, as temperatures rise further, regions such as Africa will face declining crop yields and will struggle to produce sufficient food for domestic consumption, while their major exports will likely fall in volume.

Nervousness about public speaking is one of the most ①common fears among people.

㉠ Because debate both requires and allows for a lot of preparation, individuals develop confidence in their materials and passion for the ideas they ②support.

㉡ It can serve as a real and significant _____ to effective communication and ultimately to ③ academic and professional success. Debate is an ideal setting to develop coping strategies that allow people to manage their speech anxiety.

㉢ And ④repetition of experience helps them build confidence and learn to cope with their inevitable nervousness in such a way as to prevent it from ⑤interpreting with their objectives.

㉣ Debate provides a focus on the content over style, so the attention is on the arguments, not on the person. Participants may forget to be nervous as they have so much else to think about.

Many parents who have experienced personal hardship desire a better life for their children. To want to spare children from having to go through unpleasant experiences is a noble aim, and it naturally stems from love and concern for the child. What these parents don't realize, (a)_____, is that while in the short term they may be making the lives of their children more pleasant, in the long term they may be preventing their children from acquiring self-confidence, mental strength, and important interpersonal skills. Samuel Smiles, a nineteenth-century English author, wrote, "It is doubtful whether any heavier curse could be forced on man than the complete gratification of all his wishes _____ on his part, leaving nothing for his hopes, desires, or struggles." (b)_____, for healthy development, the child needs to deal with some failure, struggle through some difficult periods, and experience some painful emotions.

In 1947, when the Dead Sea Scrolls were discovered, archaeologists set a finder's fee for each new document. ① Instead of lots of extra scrolls being found, they were simply torn apart to increase the reward. ② Farmers located a few on their land, broke them into pieces, and made a lot of money. ③ Modern incentives are no better: ④ Company boards promise bonuses for achieved targets. And what happens? ⑤ Managers invest more energy in trying to lower the targets than in growing the business. People respond to incentives by doing what is in their best interests. What is noteworthy is, first, how quickly and radically people's behavior changes when incentives come into play, and second, the fact that people respond to the incentives themselves, and not the higher _____ behind them.

The graph above shows the percentage of music listeners from different age groups who consumed only traditional format music, only downloaded music, or both formats of music in 2010. ① In each age group, except for in ages 15 to 24, those who only listened to downloaded music took up the lowest percentage. ② The older the age group was, the lower the percentage of those who listened to both was. ③ In ages 25 to 34, the percentage point gap between listeners of traditional formats only and downloaded music only was wider than in any other age group. ④ In ages 45 to 54, those who only listened to traditional formats outnumbered music listeners of the other types, taking up less than 60 percent. ⑤ More than 70 percent of the 55 to 64 age group listened to traditional formats only.

18. Ole Bull에 관한 다음 글의 내용과 일치하지 않는 것은?

 Ole Bull was born in Bergen, Norway, in 1810. He was a violinist and composer known for his unique performance method. His father wished for him to become a minister of the church, but he desired a musical career. At the age of five, he could play all of the songs he had heard his mother play on the violin. At age nine, he played first violin in the orchestra of Bergen's theater. His debut as a soloist came in 1819, and by 1828 he was made conductor of the Musical Lyceum. He is believed to have composed more than 70 works, but only about 10 remain today. In 1850, caught up in a rising tide of Norwegian romantic nationalism, Bull co-founded the first theater in which actors performed in Norwegian rather than Danish. Bull died from cancer in his home in 1880. He had held his last concert in Chicago the same year, despite his illness.

English speakers have one of the simplest systems for describing familial relationships. ① Many African language speakers would consider it absurd to use a single word like "cousin" to describe both male and female relatives, or not to distinguish whether the person described is related by blood to the speaker's father or to his mother. ② To be unable to distinguish a brother-in-law as the brother of one's wife or the husband of one's sister would seem _____ within the structure of personal relationships existing in many cultures. ③ The Hawaiian language uses the same term to refer to one's father and to the father's brother. ④ People of Northern Burma, who think in the Jinghpaw language, have eighteen basic terms for describing their kin. ⑤ Not one of them can be directly translated into English.

One of the most curious paintings of the Renaissance is a careful depiction of a weedy patch of ground by Albrecht Dürer. Dürer (1) extracts design and harmony from an (2) apparently random collection of weeds and grasses that we would normally not think twice to look at. ① By taking such an (3) ordinary thing, he is able to convey his artistry in a pure form. ② Studying relatively simple systems avoids unnecessary (4) complications, and can allow deeper insights to be obtained. ③ This is particularly true when we are trying to understand something as problematic as our ability to learn. ④ Human reactions are so complex that they can be difficult to interpret (5) subjectively. ⑤ It sometimes helps to step back and consider how more modest creatures, like bacteria or weeds, deal with the challenges they face.

This true story is about a government-owned shoe factory in Poland in the days when the country had a much more socialist economy. Every month, the Polish government gave the factory materials, and the manager was told to produce a (1) fixed number of shoes. ① Because there was no profit (2) motive involved, the manager's basic goal was to meet the quota in the easiest possible way — by producing only small shoes. ② This production strategy created a problem for people who had big feet, and so the government (3) fixed the system. ③ Now the factory received the same amount of materials, but instead of producing a fixed number of shoes, the factory was expected to produce a fixed number of tons of shoes. ④ And again, the factory's manager responded in the most (4) efficient way, by producing nothing but huge shoes. ⑤ In either situation, the government's strategy did not provide any motivation to produce shoes in (5) various sizes that met people's needs.

 Crossing the street in Los Angeles is a tricky business, but luckily, at the press of a button, we can stop traffic. Or can we? The button's real purpose is to make us believe we have an influence on the traffic lights, and thus we're better able to endure the wait for the signal to change with more patience. The same goes for "door-open" and "door-close" buttons in elevators: Many are not even connected to the electrical panel. Such tricks are also designed in offices: For some people it will always be too hot, for others, too cold. Clever technicians create _____ by installing fake temperature dials.  Both taxi and bus drivers use a part of their brain called the hippocampus to navigate routes that can sometimes be very complicated. Who would you guess has the larger hippocampus: the taxi driver or bus driver? The answer is the taxi driver. This is because taxi drivers need to take new routes quite often. To do this, they use their hippocampus _____ to memorize all kinds of routes and figure out the quickest way to reach their destinations. (a)_____, most bus drivers follow the same route every day and therefore do not stimulate their hippocampus as much. Over time, the taxi driver's role triggers a growth of neurons and synapses in the hippocampus, resulting in its increased size. Brain changes like this are the basis for seeing improvement in mental performance. (b)_____ if you put away your satellite navigation system and regularly use your memory instead, you may end up with a larger hippocampus and perhaps a better memory, too.

We often assume we see our physical surroundings as they actually are. But new research suggests that how we see the world depends on what we want from it. When a group of psychologists asked people to estimate how far away a bottle of water was, those who were thirsty guessed it was closer than nonthirsty people did.

㉠ This error in perception was actually an advantage, leading people to get what they needed.

㉡ This difference in perception showed up in a physical challenge, too. When people were told to toss a beanbag at a \$25 gift card, and that the closest would win it, people threw their beanbags nine inches short on average.

㉢ But when the gift card's value was \$0, people threw their beanbags past the card by an inch.

A new study published in Science reveals that people generally approve of driverless, or autonomous, cars programmed to sacrifice their passengers in order to save pedestrians, but these same people are not ①enthusiastic about riding in such autonomous vehicles (AVs) themselves. In six online surveys of U.S. residents conducted in 2015, researchers asked participants how they would want their AVs to behave. The scenarios involved in the surveys varied in the number of pedestrian and passenger lives that could be saved, among other factors. (a)_____, participants were asked whether it would be more moral for AVs to ②sacrifice one passenger rather than kill 10 pedestrians. Survey participants said that AVs should be programmed to be ③utilitarian and to minimize harm to pedestrians, a position that would put the safety of those outside the vehicle ahead of the driver and passengers' safety. The same respondents, (b)_____, said they prefer to buy cars that protect them and their passengers, especially if family members are involved. This suggests that if both self-protective and utilitarian AVs were allowed on the market, few people would be willing to ride in the latter — even though they would prefer others to do so. The inconsistency, which ④illustrates an ethical tension between the good of the individual and that of the public, ⑤permitted across a wide range of survey scenarios analyzed.

 (A) In the late 1990s, a family visited the public elementary school where I taught deaf students. They said they would be moving to the district and planned to enroll their deaf daughter as a first grader. They were upset that their child's kindergarten teacher cautioned them not to have high hopes for her academically. Based upon assessment results, the teacher painted a hopeless picture for (a)their little girl's future. Standing behind them was Kathy, a beautiful five-year-old with long shiny brown hair and dark flashing eyes. The whole time her parents were there, she didn't make a sound or use sign language, even when her parents prompted her.

(B) That day Kathy discovered the power of the pen. From then on, she had a new appreciation for writing. She is a young woman now and has become an excellent writer, public speaker, and student leader. During (b)her senior year in high school, Kathy became the Douglas County Rodeo Queen, and the following year, she enrolled at the University of Northern Colorado to become a teacher. Kathy keeps in touch, and I especially treasure her emails with term papers attached. (c) This young lady wields a very powerful pen!

(C) One day, Kathy got off her bus and stood in front of the school crying. The staff member there did not know enough sign language to ask her why she was crying. Finally, the staff member took Kathy into the office where she handed Kathy a pen and notepad. Kathy wrote: "PAC BAK." Immediately (d)she realized the girl left her backpack on the bus. She called the bus back to school, and soon Kathy was reunited with her backpack.

(D) After a few weeks with Kathy, I discovered I was dealing with a very bright, very strong-willed child. Although I was able to engage (e)her in a variety of learning activities, writing was a constant struggle. I tried everything to interest her in

writing class, but she would refuse to write anything.
